

Mr. Dave Liagre  
US Army Corps of Engineers  
Louisville District  
PO Box 59  
Louisville, KY 40201

Dear Mr. Liagre:

Our office will no longer be sending gypsy moth traps to Caesar Creek Lake, Clarence J. Brown Dam, West Fork Area, and William Harsha Lake. These sites are located within the Slow-the-Spread (STS) Trapping Program Action Zone. Trapping by our office in the same area is not necessary. For more information regarding the STS Program, please visit <http://www.gmsts.org>.

It is still important for Corps personnel to continue looking for gypsy moth life stages such as larvae, pupae, moths and/or egg masses while performing their normal duties. The GM Digest web page is a good resource for general gypsy moth information, as well as, having publication links that can be helpful in the identification of these life stages. The web address is: <http://www.na.fs.fed.us/fhp/gm/index.shtm>.

Thank you for your past cooperation. If any suspected gypsy moth and/or other forest health pests are detected at these Corps sites or if you have any other questions regarding this letter, please feel free to call Bill Oldland at 304-285-1585.

Sincerely,

ROBERT G. LUECKEL  
Field Representative

Forest Health Protection
